INSTALLATION

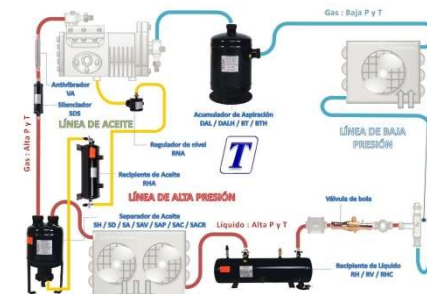

Before installation:

Make sure that: application, environmental conditions and use are those requested.

- Perform a visual inspection.
- Check that there are no stings in the paint.
- Check the entry and exit of the container.
- Check that it is the desired model.
- Note that there is no damage to the components.
- Check that the accessories *are suitable for the application*
- Arrange the vessel level, free of external vibrations.
- Do not force fastening.
- Use the manufacturer's components. Welding work must be carried out by qualified personnel.
- Equipment with valves open half way before welding.
- Protect the valves with damp cloth so as not to deteriorate.
- Do not force the container or the lines when welding.
- Perform pressure test, ensure that no damage has occurred --during auxiliary operations.
- Our equipment is designed to incorporate a safety valve.
- Ensure that it incorporates the proper valve.

CONSERVATION

- All components and accessories are for use and installation by --competent experts with fundamental knowledge refrigeration --systems, refrigerants and refrigeration oils only.
- Every three months observe the general condition of the unit.
- The unit is designed for non-aggressive environments.
